Atrial Fibrillation, also known as AF, is an issue where the heart beats irregularly. This is also known as an arrhythmia, which is where your heart has an abnormal rhythm. AF happens when the atria (the upper two chambers of your heart) begin to fibrillate, also known as quivering.

What Is Atrial Fibrillation? Your Guide To Arrhymia

If you have high cholesterol levels—which tend to increase with age—it might be due to a nagging lack of magnesium, says Dr. Carolyn Dean, author of Atrial Fibrillation: Remineralize Your Heart. "If there is not enough magnesium to limit the activity of the cholesterol-converting enzyme, we're bound to make more cholesterol than is needed."
