If no sensor malfunction is detected:€ - Measure sensor resistance between terminals 2 + 3 of harness connector to sensor. € Specified value: 480-1000 - Check sensor for short between terminals 1 + 2 as well as -1- + -3-. € Specified value: - Replace engine speed (RPM) sensor -G28- Page 24-13 , item 25 . - Check DTC memory.

Engine speed (RPM) sensor - G28-, checking

The presence of a stored code P0725 means that the powertrain control module (PCM) has detected a circuit malfunction with the engine speed sensor input signal. The engine speed input sensor is sometimes called the transmission input speed sensor and the input speed sensor. This type of code may be caused by a mechanical problem or an electrical problem. The engine speed input speed sensor is usually inserted through the transmission case, near the front of the input shaft.

A common mistake that could be made when diagnosing the P0219 code may be replacing the engine speed sensor or the powertrain control module when no parts are actually needed to be replaced. The first thing that should be done if a P0219 code exists is to use an OBD2 scanner to erase the code and road test the vehicle.
