Definition. In mathematics, the term "Ordinary Differential Equations" also known as ODE is an equation that contains only one independent variable and one or more of its derivatives with respect to the variable. In other words, the ODE is represented as the relation having one independent variable  $x$ , the real dependent variable  $y$ , with some of its derivatives.

Sturm–Liouville theory is a theory of a special type of second order linear ordinary differential equation. Their solutions are based on eigenvalues and corresponding eigenfunctions of linear operators defined via second-order homogeneous linear equations. The problems are identified as Sturm-Liouville Problems (SLP) and are named after J.C.F. Sturm and J. Liouville, who studied them in the ...

an ordinary differential equation. If  $y^{(n)}$  is the highest derivative appearing in the equation, we say that the ode is of order  $n$ . Example 1.0.5.  $\frac{d^3y}{dx^3} + 2(\cos x) \frac{dy}{dx} = y \frac{d^2y}{dx^2}$  can be written as  $(y''') + 2y(\cos x)y' = 0$ , so using the notation in the above
